This fresh investment will enable OakNorth to lend a further £ 1.5 Bn in 2018.

OakNorth Bank has been able to unlock the UK lending market for SMEs through a fintech solution called the ACORN data and technology platform. The ACORN machine, composed of three pillars – data, technology and processes, collects millions of data items and then uses machine learning algorithms to distil information to enable lenders to make informed credit decisions. ACORN enables lenders to originate, underwrite, monitor and book transactions faster and more efficiently. ACORN has a team of credit analysts and data scientists that manage the process and train the machine learning algorithms enabling the platform to continuously evolve.
